

Grand Pont de la Loire, Andrézieux

To up-light the footpaths and cycle paths on each side of the road bridge of Saint-Just-Saint-Rambert, aka «The Big Bridge over the river Loire», the 1530 Bordeaux spotlight was glued on a small rectangle stainless steel window specifically designed for this project.

With an identical appearance to the handrail material used, the small stainless steel window is screwed directly onto the handrail. It integrates the protruding 1530 Bordeaux spotlight and enables to handle all the connectics from the inside. Designed with 1 LED of 1W, it has a homogeneous dome. This spotlight creates a ring of blue light on the whole bridge, which reminds the water below.
