

### 5533-Soulary LEC-Lyon

The 5533-Soulary LED linear projector is suited to light alleys and offers uniform lighting thanks to its bespoke cable hanging system. Equipped with six high-technology LEDs in 1W or 3W, it combines powerful lighting along with compact dimensions and can be easily integrated within its urban environment. The 5533-Soulary offers a wide choice of colours, is dimmable and can be controlled by a remote DMX system. Although the LED linear is hung, its luminous flux is controlled to perfection thanks to numerous optics available and parallel rotating axis to the hanging cable (+/- 10°). The linear is made in anodised aluminium and stainless steel.

### Nebula LED Arena Luci

Nebula LED is a stylish track spotlight, available with three different beam apertures, 18°, 30° and 51°; the possibility of dimming with phase cut dimmer makes it versatile in any lighting situation. Adjustable by 360° on the horizontal axis and by 130° on the vertical axis, it can illuminate any object enhancing the brightness. Ideal for lighting shop windows, shops, art galleries. The body paint finish is in white as standard and on request it is also available in gray or black.

### PowerLug LED LUG

PowerLug LED, winner of this year's iF Design Award, is a modern floodlight designed to illuminate architectural objects and open as well as closed spaces such as sports facilities or car parks. The use of dedicated optics systems and lighting control systems allows for adjusting the product to the needs of particular applications. The luminaire features high technical parameters, convenient mounting and servicing, excellent aerodynamics and award-winning design.

### MARS LED Linear

Invisible design meets brightness and high light quality: MARS is a linear recessed solution for general lighting, which scores with minimalist design language and maximum lighting and design effects. The optimum glare control through a black matrix filter (back glare reduction) enables a UGR glare rating of UGR <math>\leq 13</math> and delivers high-quality and pleasant light. Especially user friendly is the easy, tool-free installation with mounting brackets. The MARS is available as CC (constant current) or CV (constant voltage) variant and can be specified in a length of 2m in one piece.

### Fraction Lucifer Lighting

Fraction is one of the shallowest family of high performance downlights in the industry and possibly the only wet location downlights identical to their dry location model. Fraction's elegant profile is available in true Trench and MicroFlange. Advanced ball and adjustment mechanisms are concealed with no visible fasteners, featuring a unique sliding pivot point that optimises centre beam optics. Proprietary optics in 13°, 25°, 40° and 60° beams. Fully dimmable LED source 700lm, 7W to 1,000lm/20W, in 2,700K to 4,000K. Standard 90° CR and 91° CR.

### Mya Linea Light

Introducing a new way to highlight outdoor facades. Thanks to Mya's triangular shape and silk-screened optics, its light beam starts from the corner of the building producing a 90° angle, illuminating both vertical and horizontal surfaces. A unique feature for architectural lighting, it is able to 'frame' the surfaces of buildings with lighting effects that emphasise volumes. The special 90° emission has been designed to create balanced lighting serving both aesthetic and functional purpose. Mya is a new product of the HLED Collection, a brand of Linea Light Group.
